Subject:

Quotation for Modification of 552 Type Equipments to Include Film Drive and Encoder Installations

Gentlemen:

In accordance with your telephone request of January 11, 1967, is pleased to submit herewith our quotations for the following:

- Installation of encoders and counters, including cabinetry, on the 552A S/N 101
- Installation of power assist film drives on 552A S/N 101
- 3. Installation of film drive systems on equipment 552 S/N 101

In addition to the above, we are also including quotation for adding the cam corrected encoder configuration to the 552A S/N 101 quotation for encoder installation.

18 January 1967

As described to us on the phone, the installations of the encoders and film drives must be accomplished sequentially rather than concurrently. We shall therefore accomplish the activities on the 552 S/N 101 equipment first, i.e., installation of power assist film drive. Once this equipment is completed and operational and accepted, effort will then be taken to install the power assist and encoders on the 552A S/N 101 system. To save costs we will fabricate at the same time both power assist systems within our factory. The actual installation will only be made sequentially.

As has been discussed previously and mentioned in reference (d), we would suggest that at the same time the encoders are added to the 552A equipment, the cam correction approach also be added. As you are well aware, the inherent accuracy of the 552A equipment is limited by the basic structural approach used. We feel considerable accuracy can be added to the equipment by the use of the cam approach with every expectation that the overall system accuracy can be kept within eight microns by use of the cams. By adding only encoders, we are not in a position at this time to state the accuracy expected. Under all circumstances without the cam approach the accuracy would certainly be no better than that already achieved on the 552 equipments.

At the same time that the above modifications are made to the equipments referenced above, we would suggest that you consider the inclusion of interferometric mensuration on the 552 or the 552A equipments. Reference (c) goes into sufficient detail with respect to these modifications. If you wish, we would be pleased to visit your facility and discuss this matter in detail.

The following are the modifications we are proposing to make at your facility:

552-#101 System

I. Add Power Assist Film Drive. Aside from modifying circuit on system, writing top will have to be removed and modified at the factory. Electrical work on system will be completed concurrent with work at factory.

552A-#101 System

1. Add Power Assist Film Drive when work on 552-#101 is completed. Writing top will also have to be removed for factory modification with concurrent electrical work.

1	-3- 18 January 1967
1	2. Add (4) model 27-625Z encoders, their mechanical mounts and associated cables on system carriage assembly.
	3. Provide modified Emcor caster mounted cabinet containing
1	(4) Model 2826C Reversible Counters
	(1) Model 2030B Card Punch Coupler
	(1) Nodel 2825B Control Panel
1 .	(1) Switch Assembly 701436
1 1	Arm-Mounted Sloped Front Cabinet for Control Panel Above
	(1) Set of Associated Cables to Interconnect the Above Items
1	This cabinet will be identical to that supplied for the 552-#101 system, with the only change substituting 20303 Card Punch Coupler for 25 2827B Synchronizer previously supplied so that measurement system is compatible with the IBM 526 Card Punch.
1	It is suggested that you take under consideration the substitution of a new encoder for that proposed and used on the 552
1	equipments. The encoder used on the 552 is Model No. 27-625Z. A new model is now available which improves performance and reliability of the encoder. The new model number is 29-625Z. The new model is slightly less expensive but obviously will include some drawing changes and some changes in the installation. Therefore the overall cost to the Government will be identical. If you are interested in such a change in encoder models, please indicate same at the time of purchase.
	Cost analysis sheets applicable to the film drive modifications on both equipments are included. The cost analysis sheet for the encoder and readout installation and for the cam adjusted encoder mounting are also enclosed for your consideration. These quotations are made on the basis of a fixed price contract independent of any existing contracts with your agency and should include progress payments in the amount of 75%. We would request that any resulting contract also stipulate that final payment for the
